NOTES.

MIGRATION OF BLUEBIRDS.—In several different sections of Montgomery and Delaware counties, Pa., on November the 12th, 13th and 14th, I observed large numbers of Bluebirds (*Sialia sialis*). On each of the days mentioned seeing many flights, varying, I should say, from a half-dozen to fifteen or twenty birds in each flight, and the general direction taken by all was southward. The predominant weather during this time was clear and cold, and the prevailing winds were from the north-west. I never before noted such an extensive migration of these birds. A few years ago large numbers of Robins were reported in migration in the Eastern United States, which I observed in this region, and thinking the present Bluebird migration might be likewise noted in other sections, leads me to report this little bit of migration data; although the present migration of Bluebirds, as I observed it, was not so extensive as that of the Robins.—W. E. ROTZELL, M. D., Narberth, Pa.

SOME WINTER RECORDS FOR LORAIN COUNTY, OHIO.—Never since the writer began studying the birds of this county, eleven years ago, has a winter been so fruitful in surprises as the present one. Until the 14th of December
